

Working Prototype Known Problems Report

8cres App
8cres
06/02/2021

List of functions not working correctly:

- PlaidManager.swift
 - PlaidManager{}
 - func handleSuccessWithToken()
 - When we replace the environment from sandbox to development it the app stops working due to a “time out” error. We are able to set up the authentication and connect to the bank but after some time it times out.
 - happens when we input valid bank credentials
 - To minimize issues we kept the environment as a sandbox.
- PlaidAPI.swift
 - PlaidAPI{}
 - task{}
 - case getTransactions()
 - this function executes half way only it does not work for the environment development.
 - this occurs when inputting real bank credentials
- transactions.swift
 - Transaction{}
 - Some of the data is not returned when using environment development or sandbox.
 - when we input valid bank credentials
- profileViewController.swift
 - profileViewController{}
 - deleteButton()
 - This function deletes the current user login information from the authentication list, however it does not delete the data that has been saved in the database.
- When pulling a project from Github some of the buttons that are connected to the storyboards become disconnected. This leads to some errors with trying to unwrap some of the variables.
 - we solve this or try to solve it by making new connections between the storyboard and viewController

- There are some warnings about needing some more app icons.
- When we change to iPhones that have much smaller screen the pages do not scale so much so some of the screens are cut off.
